

Advance pseodu selectors

Banefits

1. Adding Decorative Content: You can use :before and :after pseudo-selectors to add decorative content to an element, such as icons, symbols, or decorative text. This can help to enhance the design and style of your website.
2. Creating Custom Bullets: Instead of using default bullet styles, you can use :before and :after pseudo-selectors to create custom bullet points for lists. This can help to make your website more unique and visually appealing.
3. Modifying Text: You can use :before and :after pseudo-selectors to modify the text of an element, such as adding quotes around a block of text. This can help to draw attention to certain parts of the content and make it more engaging.
4. Adding Interactive Elements: You can use :before and :after pseudo-selectors to add interactive elements, such as buttons or links, to an element. This can help to make your website more interactive and user-friendly.

Advance pseodu selectors

1. `::before` - selects and styles the content before an element
