autofit css grid

The autofit feature of CSS grid allows the grid to automatically adjust its size and number of columns based on the available space in its container. This makes it very useful for creating responsive layouts that adapt to different screen sizes and devices.

```
grid-template-columns: repeat(auto-fit, minmax(200px, 1fr));
```

minmax css grid

The minmax() function accepts two arguments: the minimum size and the maximum size, both of which can be specified in any length unit. The minmax() function evaluates to the maximum size if it is greater than or equal to the minimum size, and to the minimum size if it is greater than the maximum size.

```
grid-template-columns: repeat(auto-fit, minmax(200px, 1fr));
```
