Box shadow explain

Box shadow is a CSS property that adds a shadow effect to an HTML element. It allows you to create a shadow effect around an element, which can be useful for highlighting or emphasizing certain elements on your web page.

```css
box-shadow: h-shadow v-shadow blur spread color inset;
```

```css
.box {
  box-shadow: 2px 2px 4px rgba(0, 0, 0, 0.4);
}
```

Box shadow explain

In the CSS rule box-shadow: -5px -5px blue inset;, the first value -5px refers to the horizontal offset of the shadow, which means that the shadow will be shifted 5 pixels to the left of the element's original position. The second value -5px refers to the vertical offset of the shadow, which means that the shadow will be shifted 5 pixels upwards from the element's original position.

```
box-shadow: -5px -5px blue inset;
```
